1. Find, showing your method, a six-digit integer $n$ with the following properties: (i) $n$ is a perfect square, (ii) the number formed by the last three digits of $n$ is exactly one greater than the number formed by the first three digits of $n$. (Thus $n$ might look like 123124, although this is not a square.)

2. A square piece of toast $ABCD$ of side length 1 and centre $O$ is cut in half to form two equal pieces $ABC$ and $CDA$. If the triangle $ABC$ has to be cut into two parts of equal area, one would usually cut along the line of symmetry $BO$. However, there are other ways of doing this. Find, with justification, the length and location of the shortest straight cut which divides the triangle $ABC$ into two parts of equal area.

3. For each positive integer $c$, the sequence $u_n$ of integers is defined by

\[ u_1 = 1, \quad u_2 = c, \quad u_n = (2n+1)u_{n-1} - (n^2-1)u_{n-2}, \quad (n \geq 3). \]

For which values of $c$ does this sequence have the property that $u_i$ divides $u_j$ whenever $i \leq j$?

(Note: If $x$ and $y$ are integers, then $x$ divides $y$ if and only if there exists an integer $z$ such that $y = xz$. For example, $x = 4$ divides $y = -12$, since we can take $z = -3$.)

4. Two circles touch internally at $M$. A straight line touches the inner circle at $P$ and cuts the outer circle at $Q$ and $R$. Prove that $\angle QMP = \angle RMP$.

5. Let $x, y, z$ be positive real numbers satisfying

\[ \frac{1}{3} \leq xy + yz + zx \leq 3. \]

Determine the range of values for (i) $xyz$, and (ii) $x + y + z$. 

---

**Instructions**

- Full written solutions are required. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
- One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
- Each question carries 10 marks.
- The use of rulers and compasses is allowed, but calculators are forbidden.
- Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
- Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.
- Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.
British Mathematical Olympiad
Round 2: Thursday, 11 February 1993

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions are required. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
  Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than trying all four problems.
• The use of rulers and compasses is allowed, but calculators are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

Before March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (on 15-18 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team for this summer's International Mathematical Olympiad (to be held in Istanbul, Turkey, July 13-24) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session before leaving for Istanbul.

Do not turn over until told to do so.

1. We usually measure angles in degrees, but we can use any other unit we choose. For example, if we use 30° as a new unit, then the angles of a 30°, 60°, 90° triangle would be equal to 1, 2, 3 new units respectively. The diagram shows a triangle $ABC$ with a second triangle $DEF$ inscribed in it. All the angles in the diagram are whole number multiples of some new (unknown unit); their sizes $a, b, c, d, e, f, g, h, i, j, k, ℓ$ with respect to this new angle unit are all distinct.
Find the smallest possible value of $a+b+c$ for which such an angle unit can be chosen, and mark the corresponding values of the angles $a$ to $ℓ$ in the diagram.

2. Let $m = (4^p - 1)/3$, where $p$ is a prime number exceeding 3. Prove that $2^{m-1}$ has remainder 1 when divided by $m$.

3. Let $P$ be an internal point of triangle $ABC$ and let $α, β, γ$ be defined by
  
  $α = \angle BPC - \angle BAC$, $β = \angle CPA - \angle CBA$, $γ = \angle APB - \angle ACB$.

Prove that
  
  $PA \frac{\sin \angle BAC}{\sin α} = PB \frac{\sin \angle CBA}{\sin β} = PC \frac{\sin \angle ACB}{\sin γ}$.

4. The set $Z(m, n)$ consists of all integers $N$ with $mn$ digits which have precisely $n$ ones, $n$ twos, $n$ threes, ..., $n$ ms. For each integer $N \in Z(m, n)$, define $d(N)$ to be the sum of the absolute values of the differences of all pairs of consecutive digits. For example, $12313 \in Z(3, 2)$ with $d(12313) = 1 + 0 + 1 + 2 + 2 = 6$. Find the average value of $d(N)$ as $N$ ranges over all possible elements of $Z(m, n)$.
1. Starting with any three digit number \( n \) (such as \( n = 625 \)) we obtain a new number \( f(n) \) which is equal to the sum of the three digits of \( n \), their three products in pairs, and the product of all three digits.
   (i) Find the value of \( n/f(n) \) when \( n = 625 \). (The answer is an integer!)
   (ii) Find all three digit numbers such that the ratio \( n/f(n)=1 \).

2. In triangle \( ABC \) the point \( X \) lies on \( BC \).
   (i) Suppose that \( \angle BAC = 90^\circ \), that \( X \) is the midpoint of \( BC \), and that \( \angle BAX \) is one third of \( \angle BAC \). What can you say (and prove!) about triangle \( ACX \)?
   (ii) Suppose that \( \angle BAC = 60^\circ \), that \( X \) lies one third of the way from \( B \) to \( C \), and that \( AX \) bisects \( \angle BAC \). What can you say (and prove!) about triangle \( ACX \)?

3. The sequence of integers \( u_0, u_1, u_2, u_3, \ldots \) satisfies \( u_0 = 1 \) and 
   \[ u_{n+1}u_{n-1} = ku_n \quad \text{for each} \quad n \geq 1, \]
   where \( k \) is some fixed positive integer. If \( u_{2000} = 2000 \), determine all possible values of \( k \).

4. The points \( Q, R \) lie on the circle \( \gamma \), and \( P \) is a point such that \( PQ, PR \) are tangents to \( \gamma \). \( A \) is a point on the extension of \( PQ \), and \( \gamma' \) is the circumcircle of triangle \( PAR \). The circle \( \gamma' \) cuts \( \gamma \) again at \( B \), and \( AR \) cuts \( \gamma \) at the point \( C \). Prove that \( \angle PAR = \angle ABC \).

5. An increasing sequence of integers is said to be alternating if it starts with an odd term, the second term is even, the third term is odd, the fourth is even, and so on. The empty sequence (with no term at all!) is considered to be alternating. Let \( A(n) \) denote the number of alternating sequences which only involve integers from the set \( \{1, 2, \ldots, n\} \). Show that \( A(1) = 2 \) and \( A(2) = 3 \). Find the value of \( A(20) \), and prove that your value is correct.
British Mathematical Olympiad

Round 2: Thursday, 24 February 1994

Time allowed  Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.

Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than trying all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (on 7-10 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer’s International Mathematical Olympiad (to be held in Hong Kong, 8-20 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session before leaving for Hong Kong.

Do not turn over until told to do so.

1. Find the first integer \( n > 1 \) such that the average of
\( 1^2, 2^2, 3^2, \ldots, n^2 \)
is itself a perfect square.

2. How many different (i.e. pairwise non-congruent) triangles are there with integer sides and with perimeter 1994?

3. \( AP, AQ, AR, AS \) are chords of a given circle with the property that
\[ \angle PAQ = \angle QAR = \angle RAS. \]
Prove that
\[ AR(AP + AR) = AQ(AQ + AS). \]

4. How many perfect squares are there \((\text{mod } 2^n)\)?
BRITISH MATHEMATICAL OLYMPIAD

Round 1: Wednesday 18th January 1995

Time allowed
Three and a half hours.

Instructions
• Full written solutions are required. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
• Each question carries 10 marks.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.
BRITISH MATHEMATICAL OLYMPIAD
Round 2 : Thursday, 16 February 1995

Time allowed
Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1,2,3,4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (30 March – 2 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer’s International Mathematical Olympiad (to be held in Toronto, Canada, 13–23 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session 2–6 July before leaving for Canada.

Do not turn over until told to do so.

1. Find all triples of positive integers \((a, b, c)\) such that
\[
\left(1 + \frac{1}{a}\right)\left(1 + \frac{1}{b}\right)\left(1 + \frac{1}{c}\right) = 2.
\]

2. Let \(ABC\) be a triangle, and \(D, E, F\) be the midpoints of \(BC, CA, AB\) respectively. Prove that \(\angle DAC = \angle ABE\) if, and only if, \(\angle AFC = \angle ADB\).

3. Let \(a, b, c\) be real numbers satisfying \(a < b < c\), \(a + b + c = 6\) and \(ab + bc + ca = 9\). Prove that \(0 < a < 1 < b < 3 < c < 4\).

4. (a) Determine, with careful explanation, how many ways \(2n\) people can be paired off to form \(n\) teams of 2.
(b) Prove that \((mn)!^2\) is divisible by \((m!)^{n+1}(n!)^{m+1}\) for all positive integers \(m, n\).
BRITISH MATHEMATICAL OLYMPIAD
Round 1: Wednesday, 17th January 1996

Time allowed
Three and a half hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
• Each question carries 10 marks.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

BRITISH MATHEMATICAL OLYMPIAD

1. Consider the pair of four-digit positive integers

\((M, N) = (3600, 2500)\).

Notice that \(M\) and \(N\) are both perfect squares, with equal digits in two places, and differing digits in the remaining two places. Moreover, when the digits differ, the digit in \(M\) is exactly one greater than the corresponding digit in \(N\). Find all pairs of four-digit positive integers \((M, N)\) with these properties.

2. A function \(f\) is defined over the set of all positive integers and satisfies

\[ f(1) = 1996 \]

and

\[ f(1) + f(2) + \cdots + f(n) = n^2f(n) \quad \text{for all } n > 1. \]

Calculate the exact value of \(f(1996)\).

3. Let \(ABC\) be an acute-angled triangle, and let \(O\) be its circumcentre. The circle through \(A, O\) and \(B\) is called \(S\). The lines \(CA\) and \(CB\) meet the circle \(S\) again at \(P\) and \(Q\) respectively. Prove that the lines \(CO\) and \(PQ\) are perpendicular.

(Given any triangle \(XYZ\), its circumcentre is the centre of the circle which passes through the three vertices \(X, Y\) and \(Z\).)

4. For any real number \(x\), let \([x]\) denote the greatest integer which is less than or equal to \(x\). Define

\[ q(n) = \left\lfloor \frac{n}{\sqrt{n}} \right\rfloor \quad \text{for } n = 1, 2, 3, \ldots . \]

Determine all positive integers \(n\) for which \(q(n) > q(n + 1)\).

5. Let \(a, b\) and \(c\) be positive real numbers.

(i) Prove that \(4(a^3 + b^3) \geq (a + b)^3\).

(ii) Prove that \(9(a^3 + b^3 + c^3) \geq (a + b + c)^3\).
British Mathematical Olympiad

Round 2 : Thursday, 15 February 1996

Time allowed

Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (28-31 March). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer’s International Mathematical Olympiad (to be held in New Delhi, India, 7-17 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session 30 June–4 July before leaving for India.

Do not turn over until told to do so.

1. Determine all sets of non-negative integers \( x, y \) and \( z \) which satisfy the equation

\[
2^x + 3^y = z^2.
\]

2. The sides \( a, b, c \) and \( u, v, w \) of two triangles \( ABC \) and \( UVW \) are related by the equations

\[
\begin{align*}
  u(v+w-u) &= a^2, \\
  v(w+u-v) &= b^2, \\
  w(u+v-w) &= c^2.
\end{align*}
\]

Prove that triangle \( ABC \) is acute-angled and express the angles \( U, V, W \) in terms of \( A, B, C \).

3. Two circles \( S_1 \) and \( S_2 \) touch each other externally at \( K \); they also touch a circle \( S \) internally at \( A_1 \) and \( A_2 \) respectively. Let \( P \) be one point of intersection of \( S \) with the common tangent to \( S_1 \) and \( S_2 \) at \( K \). The line \( PA_1 \) meets \( S_1 \) again at \( B_1 \), and \( PA_2 \) meets \( S_2 \) again at \( B_2 \). Prove that \( B_1B_2 \) is a common tangent to \( S_1 \) and \( S_2 \).

4. Let \( a, b, c \) and \( d \) be positive real numbers such that

\[
a + b + c + d = 12
\]

and

\[
abcd = 27 + ab + ac + ad + bc + bd + cd.
\]

Find all possible values of \( a, b, c, d \) satisfying these equations.
BRITISH MATHEMATICAL OLYMPIAD
Round 1 : Wednesday, 15 January 1997

Time allowed  Three and a half hours.
Instructions  • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
• Each question carries 10 marks.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1,2,3,4,5 in order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

BRITISH MATHEMATICAL OLYMPIAD

1. \(N\) is a four-digit integer, not ending in zero, and \(R(N)\) is the four-digit integer obtained by reversing the digits of \(N\); for example, \(R(3275) = 5723\). Determine all such integers \(N\) for which \(R(N) = 4N + 3\).

2. For positive integers \(n\), the sequence \(a_1, a_2, a_3, \ldots, a_n, \ldots\) is defined by
\[a_1 = 1; \quad a_n = \left(\frac{n+1}{n-1}\right)(a_1 + a_2 + a_3 + \cdots + a_{n-1}), \quad n > 1.
Determine the value of \(a_{1997}\).

3. The Dwarfs in the Land-under-the-Mountain have just adopted a completely decimal currency system based on the Pippin, with gold coins to the value of 1 Pippin, 10 Pippins, 100 Pippins and 1000 Pippins.
In how many ways is it possible for a Dwarf to pay, in exact coinage, a bill of 1997 Pippins?

4. Let \(ABCD\) be a convex quadrilateral. The midpoints of \(AB\), \(BC\), \(CD\) and \(DA\) are \(P\), \(Q\), \(R\) and \(S\), respectively. Given that the quadrilateral \(PQRS\) has area 1, prove that the area of the quadrilateral \(ABCD\) is 2.

5. Let \(x\), \(y\) and \(z\) be positive real numbers.
(i) If \(x + y + z \geq 3\), is it necessarily true that \[\frac{1}{x} + \frac{1}{y} + \frac{1}{z} \leq 3?\]
(ii) If \(x + y + z \leq 3\), is it necessarily true that \[\frac{1}{x} + \frac{1}{y} + \frac{1}{z} \geq 3?\]
BRITISH MATHEMATICAL OLYMPIAD
Round 2 : Thursday, 27 February 1997

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1,2,3,4 in order, and the cover sheet at the front.

1. Let $M$ and $N$ be two 9-digit positive integers with the property that if any one digit of $M$ is replaced by the digit of $N$ in the corresponding place (e.g., the ‘tens’ digit of $M$ replaced by the ‘tens’ digit of $N$) then the resulting integer is a multiple of 7.
Prove that any number obtained by replacing a digit of $N$ by the corresponding digit of $M$ is also a multiple of 7.
Find an integer $d > 9$ such that the above result concerning divisibility by 7 remains true when $M$ and $N$ are two $d$-digit positive integers.

2. In the acute-angled triangle $ABC$, $CF$ is an altitude, with $F$ on $AB$, and $BM$ is a median, with $M$ on $CA$. Given that $BM = CF$ and $\angle MBC = \angle FCA$, prove that the triangle $ABC$ is equilateral.

3. Find the number of polynomials of degree 5 with distinct coefficients from the set $\{1,2,3,4,5,6,7,8\}$ that are divisible by $x^2 - x + 1$.

4. The set $S = \{1/r : r = 1,2,3,\ldots\}$ of reciprocals of the positive integers contains arithmetic progressions of various lengths. For instance, $1/20,1/8,1/5$ is such a progression, of length 3 (and common difference $3/40$). Moreover, this is a maximal progression in $S$ of length 3 since it cannot be extended to the left or right within $S$ ($-1/40$ and $11/40$ not being members of $S$).
(i) Find a maximal progression in $S$ of length 1996.
(ii) Is there a maximal progression in $S$ of length 1997?

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (10-13 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer's International Mathematical Olympiad (to be held in Mar del Plata, Argentina, 21-31 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session in late June or early July before leaving for Argentina.

Do not turn over until told to do so.
Time allowed: Three and a half hours.

Instructions:
- Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
- One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
- Each question carries 10 marks.
- The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
- Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
- Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.
- Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. A 5×5 square is divided into 25 unit squares. One of the numbers 1, 2, 3, 4, 5 is inserted into each of the unit squares in such a way that each row, each column and each of the two diagonals contains each of the five numbers once and only once. The sum of the numbers in the four squares immediately below the diagonal from top left to bottom right is called the score. Show that it is impossible for the score to be 20. What is the highest possible score?

2. Let $a_1 = 19$, $a_2 = 98$. For $n \geq 1$, define $a_{n+2}$ to be the remainder of $a_n + a_{n+1}$ when it is divided by 100. What is the remainder when $a_1^2 + a_2^2 + \cdots + a_{1998}^2$ is divided by 8?

3. $ABP$ is an isosceles triangle with $AB = AP$ and $\angle PAB$ acute. $PC$ is the line through $P$ perpendicular to $BP$, and $C$ is a point on this line on the same side of $BP$ as $A$. (You may assume that $C$ is not on the line $AB$.) D completes the parallelogram $ABCD$. $PC$ meets $DA$ at $M$. Prove that $M$ is the midpoint of $DA$.

4. Show that there is a unique sequence of positive integers $(a_n)$ satisfying the following conditions:
   \[ a_1 = 1, \quad a_2 = 2, \quad a_4 = 12, \]
   \[ a_{n+1}a_{n-1} = a_n^2 \pm 1 \quad \text{for} \quad n = 2, 3, 4, \ldots. \]

5. In triangle $ABC$, $D$ is the midpoint of $AB$ and $E$ is the point of trisection of $BC$ nearer to $C$. Given that $\angle ADC = \angle BAE$ find $\angle BAC$. 
BRITISH MATHEMATICAL OLYMPIAD
Round 2 : Thursday, 26 February 1998

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (2-5 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer's International Mathematical Olympiad (to be held in Taiwan, 13-21 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session in early July before leaving for Taiwan.

Do not turn over until told to do so.

1. A booking office at a railway station sells tickets to 200 destinations. One day, tickets were issued to 3800 passengers. Show that
   (i) there are (at least) 6 destinations at which the passenger arrival numbers are the same;
   (ii) the statement in (i) becomes false if ‘6’ is replaced by ‘7’.

2. A triangle $ABC$ has $\angle BAC > \angle BCA$. A line $AP$ is drawn so that $\angle PAC = \angle BCA$ where $P$ is inside the triangle. A point $Q$ outside the triangle is constructed so that $PQ$ is parallel to $AB$, and $BQ$ is parallel to $AC$. $R$ is the point on $BC$ (separated from $Q$ by the line $AP$) such that $\angle PQR = \angle BCA$.
   Prove that the circumcircle of $ABC$ touches the circumcircle of $PQR$.

3. Suppose $x, y, z$ are positive integers satisfying the equation
   \[
   \frac{1}{x} - \frac{1}{y} = \frac{1}{z},
   \]
   and let $h$ be the highest common factor of $x, y, z$.
   Prove that $hxyz$ is a perfect square.
   Prove also that $h(y - x)$ is a perfect square.

4. Find a solution of the simultaneous equations
   \[
   \begin{align*}
   xy + yz + zx &= 12 \\
   xyz &= 2 + x + y + z
   \end{align*}
   \]
   in which all of $x, y, z$ are positive, and prove that it is the only such solution.
   Show that a solution exists in which $x, y, z$ are real and distinct.
1. I have four children. The age in years of each child is a positive integer between 2 and 16 inclusive and all four ages are distinct. A year ago the square of the age of the oldest child was equal to the sum of the squares of the ages of the other three. In one year’s time the sum of the squares of the ages of the oldest and the youngest will be equal to the sum of the squares of the other two children. Decide whether this information is sufficient to determine their ages uniquely, and find all possibilities for their ages.

2. A circle has diameter $AB$ and $X$ is a fixed point of $AB$ lying between $A$ and $B$. A point $P$, distinct from $A$ and $B$, lies on the circumference of the circle. Prove that, for all possible positions of $P$, \[
\tan \angle APX = \tan \angle PAX
\]
remains constant.

3. Determine a positive constant $c$ such that the equation \[
xy^2 - y^2 - x + y = c
\]
has precisely three solutions $(x, y)$ in positive integers.

4. Any positive integer $m$ can be written uniquely in base 3 form as a string of 0’s, 1’s and 2’s (not beginning with a zero). For example, \[
98 = (1 \times 81) + (0 \times 27) + (1 \times 9) + (2 \times 3) + (2 \times 1) = (10122)_3.
\]
Let $c(m)$ denote the sum of the cubes of the digits of the base 3 form of $m$; thus, for instance \[
c(98) = 1^3 + 0^3 + 1^3 + 2^3 + 2^3 = 18.
\]
Let $n$ be any fixed positive integer. Define the sequence $(u_r)$ by \[
u_1 = n \quad \text{and} \quad u_r = c(u_{r-1}) \quad \text{for} \quad r \geq 2.
\]
Show that there is a positive integer $r$ for which $u_r = 1$, 2 or 17.

5. Consider all functions $f$ from the positive integers to the positive integers such that (i) for each positive integer $m$, there is a unique positive integer $n$ such that $f(n) = m$; (ii) for each positive integer $n$, we have $f(n + 1)$ is either $4f(n) - 1$ or $f(n) - 1$. Find the set of positive integers $p$ such that $f(1999) = p$ for some function $f$ with properties (i) and (ii).
BRITISH MATHEMATICAL OLYMPIAD
Round 2 : Thursday, 25 February 1999

Time allowed     Three and a half hours.
                 Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are
  required, with complete proofs of any assertions
  you may make. Marks awarded will depend on
  the clarity of your mathematical presentation. Work
  in rough first, and then draft your final version
  carefully before writing up your best attempt.
  Rough work should be handed in, but should be
  clearly marked.
• One or two complete solutions will gain far more
  credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but
  calculators and protractors are forbidden.
• Staple all the pages neatly together in the top
  left hand corner, with questions 1,2,3,4 in order, and
  the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (8-11 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer's International Mathematical Olympiad (to be held in Bucharest, Romania, 13-22 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session (3-7 July) in Birmingham before leaving for Bucharest.

Do not turn over until told to do so.
BRITISH MATHEMATICAL OLYMPIAD

Round 1 : Wednesday, 12 January 2000

Time allowed  Three and a half hours.
Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
• Each question carries 10 marks.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Two intersecting circles $C_1$ and $C_2$ have a common tangent which touches $C_1$ at $P$ and $C_2$ at $Q$. The two circles intersect at $M$ and $N$, where $N$ is nearer to $PQ$ than $M$ is. The line $PN$ meets the circle $C_2$ again at $R$. Prove that $MQ$ bisects angle $PMR$.

2. Show that, for every positive integer $n$,
$$121^n - 25^n + 1900^n - (-4)^n$$
is divisible by 2000.

3. Triangle $ABC$ has a right angle at $A$. Among all points $P$ on the perimeter of the triangle, find the position of $P$ such that $AP + BP + CP$ is minimized.

4. For each positive integer $k > 1$, define the sequence $\{a_n\}$ by
$$a_0 = 1 \quad \text{and} \quad a_n = kn + (-1)^n a_{n-1}$$
for each $n \geq 1$. Determine all values of $k$ for which 2000 is a term of the sequence.

5. The seven dwarfs decide to form four teams to compete in the Millennium Quiz. Of course, the sizes of the teams will not all be equal. For instance, one team might consist of Doc alone, one of Dopey alone, one of Sleepy, Happy & Grumpy, and one of Bashful & Sneezy. In how many ways can the four teams be made up? (The order of the teams or of the dwarfs within the teams does not matter, but each dwarf must be in exactly one of the teams.) Suppose Snow-White agreed to take part as well. In how many ways could the four teams then be formed?
British Mathematical Olympiad

Round 2: Wednesday, 23 February 2000

Time allowed  Three and a half hours.

Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (6-9 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems. The UK Team - six members plus one reserve - for this summer’s International Mathematical Olympiad (to be held in South Korea, 13-24 July) will be chosen immediately thereafter. Those selected will be expected to participate in further correspondence work between April and July, and to attend a short residential session before leaving for South Korea.

Do not turn over until told to do so.

1. Two intersecting circles $C_1$ and $C_2$ have a common tangent which touches $C_1$ at $P$ and $C_2$ at $Q$. The two circles intersect at $M$ and $N$, where $N$ is nearer to $PQ$ than $M$ is. Prove that the triangles $MNP$ and $MNQ$ have equal areas.

2. Given that $x, y, z$ are positive real numbers satisfying $xyz = 32$, find the minimum value of

$$x^2 + 4xy + 4y^2 + 2z^2.$$ 

3. Find positive integers $a$ and $b$ such that

$$(\sqrt[3]{a} + \sqrt[3]{b} - 1)^2 = 49 + 20\sqrt[3]{6}.$$ 

4. (a) Find a set $A$ of ten positive integers such that no six distinct elements of $A$ have a sum which is divisible by 6.
(b) Is it possible to find such a set if “ten” is replaced by “eleven”?

British Mathematical Olympiad
Time allowed Three and a half hours.

Instructions

- Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
- One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
- Each question carries 10 marks.
- The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
- Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
- Complete the cover sheet provided and attach it to the front of your script, followed by the questions in order.
- Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Find all two-digit integers \(N\) for which the sum of the digits of \(10^N - N\) is divisible by 170.

2. Circle \(S\) lies inside circle \(T\) and touches it at \(A\). From a point \(P\) (distinct from \(A\)) on \(T\), chords \(PQ\) and \(PR\) of \(T\) are drawn touching \(S\) at \(X\) and \(Y\) respectively. Show that \(\measuredangle QAR = 2\measuredangle XAY\).

3. A tetromino is a figure made up of four unit squares connected by common edges.
   (i) If we do not distinguish between the possible rotations of a tetromino within its plane, prove that there are seven distinct tetrominoes.
   (ii) Prove or disprove the statement: It is possible to pack all seven distinct tetrominoes into a \(4 \times 7\) rectangle without overlapping.

4. Define the sequence \((a_n)\) by
   \[
a_n = n + \{\sqrt{n}\},
   \]
   where \(n\) is a positive integer and \(\{x\}\) denotes the nearest integer to \(x\), where halves are rounded up if necessary. Determine the smallest integer \(k\) for which the terms \(a_k, a_{k+1}, \ldots, a_{k+2000}\) form a sequence of 2001 consecutive integers.

5. A triangle has sides of length \(a, b, c\) and its circumcircle has radius \(R\). Prove that the triangle is right-angled if and only if \(a^2 + b^2 + c^2 = 8R^2\).
BRITISH MATHEMATICAL OLYMPIAD
Round 2 : Tuesday, 27 February 2001

Time allowed Three and a half hours.

Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (8-11 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems, and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend another meeting in Cambridge (probably 26-29 May). The UK Team of 6 for this summer’s International Mathematical Olympiad (to be held in Washington DC, USA, 3-14 July) will then be chosen.

Do not turn over until told to do so.

---

2001 British Mathematical Olympiad
Round 2

1. Ahmed and Beth have respectively \( p \) and \( q \) marbles, with \( p > q \).

Starting with Ahmed, each in turn gives to the other as many marbles as the other already possesses. It is found that after \( 2n \) such transfers, Ahmed has \( q \) marbles and Beth has \( p \) marbles.

Find \( \frac{p}{q} \) in terms of \( n \).

2. Find all pairs of integers \((x, y)\) satisfying

\[
1 + x^2 y = x^2 + 2xy + 2x + y.
\]

3. A triangle \( ABC \) has \( \angle ACB > \angle ABC \).

The internal bisector of \( \angle BAC \) meets \( BC \) at \( D \).

The point \( E \) on \( AB \) is such that \( \angle EDB = 90^\circ \).

The point \( F \) on \( AC \) is such that \( \angle BED = \angle DEF \).

Show that \( \angle BAD = \angle FDC \).

4. \( N \) dwarfs of heights \( 1, 2, 3, \ldots, N \) are arranged in a circle.

For each pair of neighbouring dwarfs the positive difference between the heights is calculated; the sum of these \( N \) differences is called the “total variance” \( V \) of the arrangement.

Find (with proof) the maximum and minimum possible values of \( V \).
British Mathematical Olympiad  
Round 1: Wednesday, 5 December 2001  

Time allowed  Three and a half hours.

Instructions  
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.

• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.

• Each question carries 10 marks.

• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.

• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.

• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Find all positive integers \(m, n\), where \(n\) is odd, that satisfy
\[
\frac{1}{m} + \frac{4}{n} = \frac{1}{12}.
\]

2. The quadrilateral \(ABCD\) is inscribed in a circle. The diagonals \(AC, BD\) meet at \(Q\). The sides \(DA,\) extended beyond \(A,\) and \(CB,\) extended beyond \(B,\) meet at \(P\). Given that \(CD = CP = DQ,\) prove that \(\angle CAD = 60^\circ\).

3. Find all positive real solutions to the equation
\[
x + \left\lfloor \frac{x}{6} \right\rfloor = \left\lfloor \frac{x}{2} \right\rfloor + \left\lfloor \frac{2x}{3} \right\rfloor,
\]
where \(\lfloor t \rfloor\) denotes the largest integer less than or equal to the real number \(t\).

4. Twelve people are seated around a circular table. In how many ways can six pairs of people engage in handshakes so that no arms cross? (Nobody is allowed to shake hands with more than one person at once.)

5. \(f\) is a function from \(\mathbb{Z}^+\) to \(\mathbb{Z}^+,\) where \(\mathbb{Z}^+\) is the set of non-negative integers, which has the following properties:
   a) \(f(n + 1) > f(n)\) for each \(n \in \mathbb{Z}^+,\)
   b) \(f(n + f(m)) = f(n) + m + 1\) for all \(m, n \in \mathbb{Z}^+\).
   Find all possible values of \(f(2001)\).
British Mathematical Olympiad
Round 2 : Tuesday, 26 February 2002

Time allowed
Three and a half hours.

Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (4 – 7 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems, and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend another meeting in Cambridge. The UK Team of 6 for this summer’s International Mathematical Olympiad (to be held in Glasgow, 22 – 31 July) will then be chosen.

Do not turn over until told to do so.

1. The altitude from one of the vertices of an acute-angled triangle $ABC$ meets the opposite side at $D$. From $D$ perpendiculars $DE$ and $DF$ are drawn to the other two sides. Prove that the length of $EF$ is the same whichever vertex is chosen.

2. A conference hall has a round table with $n$ chairs. There are $n$ delegates to the conference. The first delegate chooses his or her seat arbitrarily. Thereafter the $(k + 1)$th delegate sits $k$ places to the right of the $k$th delegate, for $1 \leq k \leq n - 1$. (In particular, the second delegate sits next to the first.) No chair can be occupied by more than one delegate. Find the set of values $n$ for which this is possible.

3. Prove that the sequence defined by
\[ y_0 = 1, \quad y_{n+1} = \frac{1}{2} (3y_n + \sqrt{5y_n^2 - 4}), \quad (n \geq 0) \]
consists only of integers.

4. Suppose that $B_1, \ldots, B_N$ are $N$ spheres of unit radius arranged in space so that each sphere touches exactly two others externally. Let $P$ be a point outside all these spheres, and let the $N$ points of contact be $C_1, \ldots, C_N$. The length of the tangent from $P$ to the sphere $B_i$ $(1 \leq i \leq N)$ is denoted by $t_i$. Prove the product of the quantities $t_i$ is not more than the product of the distances $PC_i$. 

2002 British Mathematical Olympiad
Round 2
British Mathematical Olympiad
Round 1: Wednesday, 11 December 2002

Time allowed
Three and a half hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
• Each question carries 10 marks.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Given that
\[ 34! = 295\,232\,799\,cd9\,604\,140\,847\,618\,609\,643\,5ab\,000\,000, \]
determine the digits \(a, b, c, d\).

2. The triangle \(ABC\), where \(AB < AC\), has circumcircle \(S\). The perpendicular from \(A\) to \(BC\) meets \(S\) again at \(P\). The point \(X\) lies on the line segment \(AC\), and \(BX\) meets \(S\) again at \(Q\).
Show that \(BX = CX\) if and only if \(PQ\) is a diameter of \(S\).

3. Let \(x, y, z\) be positive real numbers such that \(x^2 + y^2 + z^2 = 1\).
Prove that
\[ x^2yz + xyz^2 + xy^2z \leq \frac{1}{3}. \]

4. Let \(m\) and \(n\) be integers greater than 1. Consider an \(m \times n\) rectangular grid of points in the plane. Some \(k\) of these points are coloured red in such a way that no three red points are the vertices of a right-angled triangle two of whose sides are parallel to the sides of the grid.
Determine the greatest possible value of \(k\).

5. Find all solutions in positive integers \(a, b, c\) to the equation
\[ a!b! = a! + b! + c! \]
British Mathematical Olympiad
Round 2: Tuesday, 25 February 2003

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (3-6 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems, and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s International Mathematical Olympiad (to be held in Japan, 7-19 July) will then be chosen.

Do not turn over until told to do so.

1. For each integer \( n > 1 \), let \( p(n) \) denote the largest prime factor of \( n \). Determine all triples \( x, y, z \) of distinct positive integers satisfying
   (i) \( x, y, z \) are in arithmetic progression, and
   (ii) \( p(\text{xyz}) \leq 3 \).

2. Let \( ABC \) be a triangle and let \( D \) be a point on \( AB \) such that \( 4AD = AB \). The half-line \( \ell \) is drawn on the same side of \( AB \) as \( C \), starting from \( D \) and making an angle of \( \theta \) with \( DA \) where \( \theta = \angle ACB \). If the circumcircle of \( ABC \) meets the half-line \( \ell \) at \( P \), show that \( PB = 2PD \).

3. Let \( f : \mathbb{N} \to \mathbb{N} \) be a permutation of the set \( \mathbb{N} \) of all positive integers.
   (i) Show that there is an arithmetic progression of positive integers \( a, a + d, a + 2d \), where \( d > 0 \), such that
   \[ f(a) < f(a + d) < f(a + 2d). \]
   (ii) Must there be an arithmetic progression \( a, a + d, \ldots, a + 2003d \), where \( d > 0 \), such that
   \[ f(a) < f(a + d) < \ldots < f(a + 2003d)? \]

   [A permutation of \( \mathbb{N} \) is a one-to-one function whose image is the whole of \( \mathbb{N} \); that is, a function from \( \mathbb{N} \) to \( \mathbb{N} \) such that for all \( m \in \mathbb{N} \) there exists a unique \( n \in \mathbb{N} \) such that \( f(n) = m \).]

4. Let \( f \) be a function from the set of non-negative integers into itself such that for all \( n \geq 0 \)
   (i) \( (f(2n + 1))^2 - (f(2n))^2 = 6f(n) + 1 \), and
   (ii) \( f(2n) \geq f(n) \).

   How many numbers less than 2003 are there in the image of \( f \)?
British Mathematical Olympiad Round 1: Wednesday, 3 December 2003

Time allowed Three and a half hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.

• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.

• Each question carries 10 marks.

• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.

• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1, 2, 3, 4, 5 in order.

• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Solve the simultaneous equations
   \[ ab + c + d = 3, \quad bc + d + a = 5, \quad cd + a + b = 2, \quad da + b + c = 6, \]
   where \(a, b, c, d\) are real numbers.

2. \(ABCD\) is a rectangle, \(P\) is the midpoint of \(AB\), and \(Q\) is the point on \(PD\) such that \(CQ\) is perpendicular to \(PD\). Prove that the triangle \(BQC\) is isosceles.

3. Alice and Barbara play a game with a pack of \(2n\) cards, on each of which is written a positive integer. The pack is shuffled and the cards laid out in a row, with the numbers facing upwards. Alice starts, and the girls take turns to remove one card from either end of the row, until Barbara picks up the final card. Each girl's score is the sum of the numbers on her chosen cards at the end of the game. Prove that Alice can always obtain a score at least as great as Barbara's.

4. A set of positive integers is defined to be wicked if it contains no three consecutive integers. We count the empty set, which contains no elements at all, as a wicked set. Find the number of wicked subsets of the set 
   \[ \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10\}. \]

5. Let \(p, q\) and \(r\) be prime numbers. It is given that \(p\) divides \(qr - 1\), \(q\) divides \(rp - 1\), and \(r\) divides \(pq - 1\). Determine all possible values of \(pqr\).
British Mathematical Olympiad  
Round 2: Tuesday, 24 February 2004

Time allowed  Three and a half hours.  
Each question is worth 10 marks.  

Instructions  
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.  
• One or two complete solutions will gain far more credit than partial attempts at all four problems.  
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.  
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (1-5 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems, and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s International Mathematical Olympiad (to be held in Athens, 9-18 July) will then be chosen.

Do not turn over until told to do so.

1. Let $ABC$ be an equilateral triangle and $D$ an internal point of the side $BC$. A circle, tangent to $BC$ at $D$, cuts $AB$ internally at $M$ and $N$, and $AC$ internally at $P$ and $Q$.  
Show that $BD + AM + AN = CD + AP + AQ$.  

2. Show that there is an integer $n$ with the following properties:  
(i) the binary expansion of $n$ has precisely 2004 0s and 2004 1s;  
(ii) 2004 divides $n$.

3. (a) Given real numbers $a, b, c$, with $a + b + c = 0$, prove that
$$a^3 + b^3 + c^3 > 0 \text{ if and only if } a^5 + b^5 + c^5 > 0.$$  
(b) Given real numbers $a, b, c, d$, with $a + b + c + d = 0$, prove that
$$a^3 + b^3 + c^3 + d^3 > 0 \text{ if and only if } a^5 + b^5 + c^5 + d^5 > 0.$$  

4. The real number $x$ between 0 and 1 has decimal representation
$$0.a_1a_2a_3a_4 \ldots$$  
with the following property: the number of distinct blocks of the form
$$a_ka_{k+1}a_{k+2} \ldots a_{k+2003},$$  
as $k$ ranges through all positive integers, is less than or equal to 2004.  
Prove that $x$ is rational.
British Mathematical Olympiad
Round 1 : Wednesday, 1 December 2004

Time allowed Three and a half hours.
Instructions  • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Do not hand in rough work.
• One complete solution will gain far more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all five problems.
• Each question carries 10 marks.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by the questions 1,2,3,4,5 in order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Each of Paul and Jenny has a whole number of pounds. He says to her: “If you give me £3, I will have \(n\) times as much as you”. She says to him: “If you give me £n, I will have 3 times as much as you”. Given that all these statements are true and that \(n\) is a positive integer, what are the possible values for \(n\)?

2. Let \(ABC\) be an acute-angled triangle, and let \(D, E\) be the feet of the perpendiculars from \(A, B\) to \(BC, CA\) respectively. Let \(P\) be the point where the line \(AD\) meets the semicircle constructed outwardly on \(BC\), and \(Q\) be the point where the line \(BE\) meets the semicircle constructed outwardly on \(AC\). Prove that \(CP = CQ\).

3. Determine the least natural number \(n\) for which the following result holds: No matter how the elements of the set \(\{1, 2, \ldots, n\}\) are coloured red or blue, there are integers \(x, y, z, w\) in the set (not necessarily distinct) of the same colour such that \(x + y + z = w\).

4. Determine the least possible value of the largest term in an arithmetic progression of seven distinct primes.

5. Let \(S\) be a set of rational numbers with the following properties:
   i) \(\frac{1}{2} \in S;
    \)
   ii) If \(x \in S\), then both \(\frac{1}{x+1} \in S\) and \(\frac{x}{x+1} \in S\).

Prove that \(S\) contains all rational numbers in the interval \(0 < x < 1\).

British Mathematical Olympiad
Round 2 : Tuesday, 1 February 2005

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (7-11 April). On the final morning of the training session, students sit a paper with just 3 Olympiad-style problems, and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s International Mathematical Olympiad (to be held in Merida, Mexico, 8 - 19 July) will then be chosen.

Do not turn over until told to do so.

2005 British Mathematical Olympiad
Round 2

1. The integer $N$ is positive. There are exactly 2005 ordered pairs $(x, y)$ of positive integers satisfying $\frac{1}{x} + \frac{1}{y} = \frac{1}{N}$.

Prove that $N$ is a perfect square.

2. In triangle $ABC$, $\angle BAC = 120^\circ$. Let the angle bisectors of angles $A, B$ and $C$ meet the opposite sides in $D, E$ and $F$ respectively.

Prove that the circle on diameter $EF$ passes through $D$.

3. Let $a, b, c$ be positive real numbers. Prove that

$$\left(\frac{a}{b} + \frac{b}{c} + \frac{c}{a}\right)^2 \geq (a + b + c)\left(\frac{1}{a} + \frac{1}{b} + \frac{1}{c}\right).$$

4. Let $X = \{A_1, A_2, \ldots, A_n\}$ be a set of distinct 3-element subsets of $\{1, 2, \ldots, 36\}$ such that

i) $A_i$ and $A_j$ have non-empty intersection for every $i, j$.

ii) The intersection of all the elements of $X$ is the empty set.

Show that $n \leq 100$. How many such sets $X$ are there when $n = 100$?
British Mathematical Olympiad  
Round 1 : Wednesday, 30 November 2005

Time allowed  3½ hours.

Instructions • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.

• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.

• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.

• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.

• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.

• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Let \( n \) be an integer greater than 6. Prove that if \( n - 1 \) and \( n + 1 \) are both prime, then \( n^2(n^2 + 16) \) is divisible by 720. Is the converse true?

2. Adrian teaches a class of six pairs of twins. He wishes to set up teams for a quiz, but wants to avoid putting any pair of twins into the same team. Subject to this condition:
   i) In how many ways can he split them into two teams of six?
   ii) In how many ways can he split them into three teams of four?

3. In the cyclic quadrilateral \(ABCD\), the diagonal \(AC\) bisects the angle \(DAB\). The side \(AD\) is extended beyond \(D\) to a point \(E\). Show that \(CE = CA\) if and only if \(DE = AB\).

4. The equilateral triangle \(ABC\) has sides of integer length \(N\). The triangle is completely divided (by drawing lines parallel to the sides of the triangle) into equilateral triangular cells of side length 1.

   A continuous route is chosen, starting inside the cell with vertex \(A\) and always crossing from one cell to another through an edge shared by the two cells. No cell is visited more than once. Find, with proof, the greatest number of cells which can be visited.

5. Let \(G\) be a convex quadrilateral. Show that there is a point \(X\) in the plane of \(G\) with the property that every straight line through \(X\) divides \(G\) into two regions of equal area if and only if \(G\) is a parallelogram.

6. Let \(T\) be a set of 2005 coplanar points with no three collinear. Show that, for any of the 2005 points, the number of triangles it lies strictly within, whose vertices are points in \(T\), is even.

British Mathematical Olympiad
Round 2 : Tuesday, 31 January 2006

Time allowed  Three and a half hours.
Each question is worth 10 marks.

Instructions  • Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1,2,3,4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (6-10 April). At the training session, students sit a pair of IMO-style papers and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s International Mathematical Olympiad (to be held in Ljubljana, Slovenia 10-18 July) will then be chosen.

Do not turn over until told to do so.

2005/6 British Mathematical Olympiad
Round 2

1. Find the minimum possible value of $x^2 + y^2$ given that $x$ and $y$ are real numbers satisfying
$$xy(x^2 - y^2) = x^2 + y^2 \quad \text{and} \quad x \neq 0.$$  

2. Let $x$ and $y$ be positive integers with no prime factors larger than 5. Find all such $x$ and $y$ which satisfy
$$x^2 - y^2 = 2^k$$for some non-negative integer $k$.

3. Let $ABC$ be a triangle with $AC > AB$. The point $X$ lies on the side $BA$ extended through $A$, and the point $Y$ lies on the side $CA$ in such a way that $BX = CA$ and $CY = BA$. The line $XY$ meets the perpendicular bisector of side $BC$ at $P$. Show that
$$\angle BPC + \angle BAC = 180^\circ.$$  

4. An exam consisting of six questions is sat by 2006 children. Each question is marked either right or wrong. Any three children have right answers to at least five of the six questions between them. Let $N$ be the total number of right answers achieved by all the children (i.e. the total number of questions solved by child 1 + the total solved by child 2 + $\cdots$ + the total solved by child 2006). Find the least possible value of $N$. 
British Mathematical Olympiad
Round 1 : Friday, 1 December 2006

Time allowed 3½ hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Find four prime numbers less than 100 which are factors of $3^{32} - 2^{32}$.

2. In the convex quadrilateral $ABCD$, points $M, N$ lie on the side $AB$ such that $AM = MN = NB$, and points $P, Q$ lie on the side $CD$ such that $CP = PQ = QD$. Prove that

$$\text{Area of } AMCP = \text{Area of } MNPQ = \frac{1}{3} \text{Area of } ABCD.$$ 

3. The number 916238457 is an example of a nine-digit number which contains each of the digits 1 to 9 exactly once. It also has the property that the digits 1 to 5 occur in their natural order, while the digits 1 to 6 do not. How many such numbers are there?

4. Two touching circles $S$ and $T$ share a common tangent which meets $S$ at $A$ and $T$ at $B$. Let $AP$ be a diameter of $S$ and let the tangent from $P$ to $T$ touch it at $Q$. Show that $AP = PQ$.

5. For positive real numbers $a, b, c$, prove that

$$(a^2 + b^2)^2 \geq (a + b + c)(a + b - c)(b + c - a)(c + a - b).$$

6. Let $n$ be an integer. Show that, if $2 + 2\sqrt{1 + 12n^2}$ is an integer, then it is a perfect square.
British Mathematical Olympiad
Round 2 : Tuesday, 30 January 2007

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
- Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.

- One or two complete solutions will gain far more credit than partial attempts at all four problems.

- The use of rulers and compasses is allowed, but calculators and protractors are forbidden.

- Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (29th March - 2nd April). At the training session, students sit a pair of IMO-style papers and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of six for this summer’s International Mathematical Olympiad (to be held in Hanoi, Vietnam 23-31 July) will then be chosen.

Do not turn over until told to do so.

1. Triangle $ABC$ has integer-length sides, and $AC = 2007$. The internal bisector of $\angle BAC$ meets $BC$ at $D$. Given that $AB = CD$, determine $AB$ and $BC$.

2. Show that there are infinitely many pairs of positive integers $(m, n)$ such that
\[
\frac{m + 1}{n} + \frac{n + 1}{m}
\]
is a positive integer.

3. Let $ABC$ be an acute-angled triangle with $AB > AC$ and $\angle BAC = 60^\circ$. Denote the circumcentre by $O$ and the orthocentre by $H$ and let $OH$ meet $AB$ at $P$ and $AC$ at $Q$. Prove that $PO = HQ$.

Note: The circumcentre of triangle $ABC$ is the centre of the circle which passes through the vertices $A, B$ and $C$. The orthocentre is the point of intersection of the perpendiculars from each vertex to the opposite side.

4. In the land of Hexagonia, the six cities are connected by a rail network such that there is a direct rail line connecting each pair of cities. On Sundays, some lines may be closed for repair. The passengers’ rail charter stipulates that any city must be accessible by rail from any other (not necessarily directly) at all times. In how many different ways can some of the lines be closed subject to this condition?
British Mathematical Olympiad
Round 1: Friday, 30 November 2007

Time allowed 3\frac{1}{2} hours.

Instructions

\bullet Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.

\bullet One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.

\bullet Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.

\bullet The use of rulers and compasses is allowed, but calculators and protractors are forbidden.

\bullet Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

\bullet Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.

\bullet Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Find the value of \( \frac{1^4 + 2007^4 + 2008^4}{1^2 + 2007^2 + 2008^2} \).

2. Find all solutions in positive integers \( x, y, z \) to the simultaneous equations

\begin{align*}
&x + y - z = 12 \\
&x^2 + y^2 - z^2 = 12.
\end{align*}

3. Let \( ABC \) be a triangle, with an obtuse angle at \( A \). Let \( Q \) be a point (other than \( A, B \) or \( C \)) on the circumcircle of the triangle, on the same side of chord \( BC \) as \( A \), and let \( P \) be the other end of the diameter through \( Q \). Let \( V \) and \( W \) be the feet of the perpendiculars from \( Q \) onto \( CA \) and \( AB \) respectively. Prove that the triangles \( PBC \) and \( AWV \) are similar. \([\text{Note: the circumcircle of the triangle } ABC \text{ is the circle which passes through the vertices } A, B \text{ and } C\].

4. Let \( S \) be a subset of the set of numbers \( \{1, 2, 3, ..., 2008\} \) which consists of 756 distinct numbers. Show that there are two distinct elements \( a, b \) of \( S \) such that \( a + b \) is divisible by 8.

5. Let \( P \) be an internal point of triangle \( ABC \). The line through \( P \) parallel to \( AB \) meets \( BC \) at \( L \), the line through \( P \) parallel to \( BC \) meets \( CA \) at \( M \), and the line through \( P \) parallel to \( CA \) meets \( AB \) at \( N \). Prove that

\[ \frac{BL \times CM \times AN}{LC \times MA \times NB} \leq \frac{1}{8} \]

and locate the position of \( P \) in triangle \( ABC \) when equality holds.

6. The function \( f \) is defined on the set of positive integers by \( f(1) = 1 \), \( f(2n) = 2f(n) \), and \( nf(2n + 1) = (2n + 1)(f(n) + n) \) for all \( n \geq 1 \).

i) Prove that \( f(n) \) is always an integer.

ii) For how many positive integers less than 2007 is \( f(n) = 2n \) ?
British Mathematical Olympiad
Round 2 : Thursday, 31 January 2008

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1,2,3,4 in order, and the cover sheet at the front.

In early March, twenty students will be invited to attend the training session to be held at Trinity College, Cambridge (3-7 April). At the training session, students sit a pair of IMO-style papers and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer's International Mathematical Olympiad (to be held in Madrid, Spain 14-22 July) will then be chosen.

Do not turn over until told to do so.

1. Find the minimum value of $x^2 + y^2 + z^2$ where $x, y, z$ are real numbers such that $x^3 + y^3 + z^3 - 3xyz = 1$.

2. Let triangle $ABC$ have incentre $I$ and circumcentre $O$. Suppose that $\angle AIO = 90^\circ$ and $\angle CIO = 45^\circ$. Find the ratio $AB : BC : CA$.

3. Adrian has drawn a circle in the $xy$-plane whose radius is a positive integer at most 2008. The origin lies somewhere inside the circle. You are allowed to ask him questions of the form “Is the point $(x, y)$ inside your circle?” After each question he will answer truthfully “yes” or “no”. Show that it is always possible to deduce the radius of the circle after at most sixty questions. [Note: Any point which lies exactly on the circle may be considered to lie inside the circle.]

4. Prove that there are infinitely many pairs of distinct positive integers $x, y$ such that $x^2 + y^3$ is divisible by $x^3 + y^2$. 
British Mathematical Olympiad
Round 1: Thursday, 4 December 2008

Time allowed 3 1/2 hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Consider a standard 8 x 8 chessboard consisting of 64 small squares coloured in the usual pattern, so 32 are black and 32 are white. A zig-zag path across the board is a collection of eight white squares, one in each row, which meet at their corners. How many zig-zag paths are there?

2. Find all real values of x, y and z such that
   \((x + 1)yz = 12, (y + 1)zx = 4\) and \((z + 1)xy = 4\).

3. Let ABPC be a parallelogram such that ABC is an acute-angled triangle. The circumcircle of triangle ABC meets the line CP again at Q. Prove that PQ = AC if, and only if, \(\angle ABC = 60^\circ\). The circumcircle of a triangle is the circle which passes through its vertices.

4. Find all positive integers n such that both \(n + 2008\) divides \(n^2 + 2008\) and \(n + 2009\) divides \(n^2 + 2009\).

5. Determine the sequences \(a_0, a_1, a_2, \ldots\) which satisfy all of the following conditions:
   a) \(a_{n+1} = 2a_n^2 - 1\) for every integer \(n \geq 0\),
   b) \(a_0\) is a rational number and
   c) \(a_i = a_j\) for some \(i, j\) with \(i \neq j\).

6. The obtuse-angled triangle ABC has sides of length a, b and c opposite the angles \(\angle A, \angle B\) and \(\angle C\) respectively. Prove that
   \(a^3 \cos A + b^3 \cos B + c^3 \cos C < abc\).
British Mathematical Olympiad
Round 2 : Thursday, 29 January 2009

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1,2,3,4 in order, and the cover sheet at the front.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (2-6 April). At the training session, students sit a pair of IMO-style papers and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s IMO (to be held in Bremen, Germany 13-22 July) will then be chosen.

Do not turn over until told to do so.

2008/9 British Mathematical Olympiad
Round 2

1. Find all solutions in non-negative integers \( a, b \) to \( \sqrt{a} + \sqrt{b} = \sqrt{2009} \).

2. Let \( ABC \) be an acute-angled triangle with \( \angle B = \angle C \). Let the circumcentre be \( O \) and the orthocentre be \( H \). Prove that the centre of the circle \( BOH \) lies on the line \( AB \). The circumcentre of a triangle is the centre of its circumcircle. The orthocentre of a triangle is the point where its three altitudes meet.

3. Find all functions \( f \) from the real numbers to the real numbers which satisfy
\[
f(x^3) + f(y^3) = (x + y)(f(x^2) + f(y^2) - f(xy))
\]
for all real numbers \( x \) and \( y \).

4. Given a positive integer \( n \), let \( b(n) \) denote the number of positive integers whose binary representations occur as blocks of consecutive integers in the binary expansion of \( n \). For example \( b(13) = 6 \) because \( 13 = 1101_2 \), which contains as consecutive blocks the binary representations of \( 13 = 1101_2, 6 = 110_2, 5 = 101_2, 3 = 11_2, 2 = 10_2 \) and \( 1 = 1_2 \).

Show that if \( n \leq 2500 \), then \( b(n) \leq 39 \), and determine the values of \( n \) for which equality holds.
British Mathematical Olympiad
Round 1: Thursday, 3 December 2009

Time allowed 3\frac{1}{2} hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.

• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.

• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.

• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.

• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.

• Staple all the pages neatly together in the top left hand corner.

Do not turn over until told to do so.

1. Find all integers \(x, y\) and \(z\) such that
\[x^2 + y^2 + z^2 = 2(yz + 1)\] and \(x + y + z = 4018\).

2. Points \(A, B, C, D, E\) lie, in that order, on a circle and the lines \(AB\) and \(ED\) are parallel. Prove that \(\angle ABC = 90^\circ\) if, and only if, \(AC^2 = BD^2 + CE^2\).

3. Isaac attempts all six questions on an Olympiad paper in order. Each question is marked on a scale from 0 to 10. He never scores more in a later question than in any earlier question. How many different possible sequences of six marks can he achieve?

4. Two circles, of different radius, with centres at \(B\) and \(C\), touch externally at \(A\). A common tangent, not through \(A\), touches the first circle at \(D\) and the second at \(E\). The line through \(A\) which is perpendicular to \(DE\) and the perpendicular bisector of \(BC\) meet at \(F\). Prove that \(BC = 2AF\).

5. Find all functions \(f\), defined on the real numbers and taking real values, which satisfy the equation \(f(x)f(y) = f(x + y) + xy\) for all real numbers \(x\) and \(y\).

6. Long John Silverman has captured a treasure map from Adam McBones. Adam has buried the treasure at the point \((x, y)\) with integer co-ordinates (not necessarily positive). He has indicated on the map the values of \(x^2 + y\) and \(x + y^2\), and these numbers are distinct. Prove that Long John has to dig only in one place to find the treasure.
United Kingdom Mathematics Trust

British Mathematical Olympiad
Round 2 : Thursday, 28 January 2010

Time allowed
Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1,2,3,4 in order, and the cover sheet at the front.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (8-12 April). At the training session, students sit a pair of IMO-style papers and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s IMO (to be held in Astana, Kazakhstan 6-12 July) will then be chosen.

Do not turn over until told to do so.

1. There are 2010 children at a mathematics camp. Each has at most three friends at the camp, and if A is friends with B, then B is friends with A. The camp leader would like to line the children up so that there are at most 2010 children between any pair of friends. Is it always possible to do this?

2. In triangle \(ABC\) the centroid is \(G\) and \(D\) is the midpoint of \(CA\). The line through \(G\) parallel to \(BC\) meets \(AB\) at \(E\). Prove that \(\angle AEC \neq \angle DGC\) if, and only if, \(\angle ACB = 90^\circ\). The centroid of a triangle is the intersection of the three medians, the lines which join each vertex to the midpoint of the opposite side.

3. The integer \(x\) is at least 3 and \(n = x^6 - 1\). Let \(p\) be a prime and \(k\) be a positive integer such that \(p^k\) is a factor of \(n\). Show that \(p^k < 8n\).

4. Prove that, for all positive real numbers \(x, y\) and \(z\),
\[4(x + y + z)^3 > 27(x^2y + y^2z + z^2x).\]
British Mathematical Olympiad
Round 1: Thursday, 2 December 2010

Time allowed
3 1/2 hours.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.
• To accommodate candidates sitting in other time-zones, please do not discuss the paper on the internet until 8am on Friday 3 December GMT.

1. One number is removed from the set of integers from 1 to \( n \). The average of the remaining numbers is \( 40 \frac{3}{4} \). Which integer was removed?

2. Let \( s \) be an integer greater than 6. A solid cube of side \( s \) has a square hole of side \( x < 6 \) drilled directly through from one face to the opposite face (so the drill removes a cuboid). The volume of the remaining solid is numerically equal to the total surface area of the remaining solid. Determine all possible integer values of \( x \).

3. Let \( ABC \) be a triangle with \( \angle CAB \) a right-angle. The point \( L \) lies on the side \( BC \) between \( B \) and \( C \). The circle \( ABL \) meets the line \( AC \) again at \( M \) and the circle \( CAL \) meets the line \( AB \) again at \( N \). Prove that \( L, M \) and \( N \) lie on a straight line.

4. Isaac has a large supply of counters, and places one in each of the \( 1 \times 1 \) squares of an \( 8 \times 8 \) chessboard. Each counter is either red, white or blue. A particular pattern of coloured counters is called an arrangement. Determine whether there are more arrangements which contain an even number of red counters or more arrangements which contain an odd number of red counters. Note that 0 is an even number.

5. Circles \( S_1 \) and \( S_2 \) meet at \( L \) and \( M \). Let \( P \) be a point on \( S_2 \). Let \( PL \) and \( PM \) meet \( S_1 \) again at \( Q \) and \( R \) respectively. The lines \( QM \) and \( RL \) meet at \( K \). Show that, as \( P \) varies on \( S_2 \), \( K \) lies on a fixed circle.

6. Let \( a, b \) and \( c \) be the lengths of the sides of a triangle. Suppose that \( ab + bc + ca = 1 \). Show that \( (a + 1)(b + 1)(c + 1) < 4 \).
British Mathematical Olympiad
Round 2 : Thursday, 27 January 2011

Time allowed  Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other timezones, please do not discuss any aspect of the paper on the internet until 8am on Friday 28 January GMT.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (14-18 April 2011). At the training session, students sit a pair of IMO-style papers and 8 students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of 6 for this summer’s IMO (to be held in Amsterdam, The Netherlands 16–24 July) will then be chosen.

Do not turn over until told to do so.

1. Let $ABC$ be a triangle and $X$ be a point inside the triangle. The lines $AX, BX$ and $CX$ meet the circle $ABC$ again at $P, Q$ and $R$ respectively. Choose a point $U$ on $XP$ which is between $X$ and $P$. Suppose that the lines through $U$ which are parallel to $AB$ and $CA$ meet $XQ$ and $XR$ at points $V$ and $W$ respectively. Prove that the points $R, W, V$ and $Q$ lie on a circle.

2. Find all positive integers $x$ and $y$ such that $x + y + 1$ divides $2xy$ and $x + y - 1$ divides $x^2 + y^2 - 1$.

3. The function $f$ is defined on the positive integers as follows;
   \[ f(1) = 1; \]
   \[ f(2n) = f(n) \text{ if } n \text{ is even}; \]
   \[ f(2n) = 2f(n) \text{ if } n \text{ is odd}; \]
   \[ f(2n + 1) = 2f(n) + 1 \text{ if } n \text{ is even}; \]
   \[ f(2n + 1) = f(n) \text{ if } n \text{ is odd}. \]
   Find the number of positive integers $n$ which are less than 2011 and have the property that $f(n) = f(2011)$.

4. Let $G$ be the set of points $(x, y)$ in the plane such that $x$ and $y$ are integers in the range $1 \leq x, y \leq 2011$. A subset $S$ of $G$ is said to be parallelogram-free if there is no proper parallelogram with all its vertices in $S$. Determine the largest possible size of a parallelogram-free subset of $G$. Note that a proper parallelogram is one where its vertices do not all lie on the same line.
British Mathematical Olympiad
Round 1: Friday, 2 December 2011

Time allowed
3½ hours.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.
• To accommodate candidates sitting in other time-zones, please do not discuss the paper on the internet until 8am GMT on Saturday 3 December. Do not turn over until told to do so.

1. Find all (positive or negative) integers \( n \) for which \( n^2 + 20n + 11 \) is a perfect square. Remember that you must justify that you have found them all.

2. Consider the numbers 1, 2, \ldots, \( n \). Find, in terms of \( n \), the largest integer \( t \) such that these numbers can be arranged in a row so that all consecutive terms differ by at least \( t \).

3. Consider a circle \( S \). The point \( P \) lies outside \( S \) and a line is drawn through \( P \), cutting \( S \) at distinct points \( X \) and \( Y \). Circles \( S_1 \) and \( S_2 \) are drawn through \( P \) which are tangent to \( S \) at \( X \) and \( Y \) respectively. Prove that the difference of the radii of \( S_1 \) and \( S_2 \) is independent of the positions of \( P \), \( X \) and \( Y \).

4. Initially there are \( m \) balls in one bag, and \( n \) in the other, where \( m, n > 0 \). Two different operations are allowed: a) Remove an equal number of balls from each bag; b) Double the number of balls in one bag. Is it now always possible to empty both bags after a finite sequence of operations? Operation b) is now replaced with b') Triple the number of balls in one bag. Is it now always possible to empty both bags after a finite sequence of operations?

5. Prove that the product of four consecutive positive integers cannot be equal to the product of two consecutive positive integers.

6. Let \( ABC \) be an acute-angled triangle. The feet of the altitudes from \( A \), \( B \) and \( C \) are \( D \), \( E \) and \( F \) respectively. Prove that \( DE + DF \leq BC \) and determine the triangles for which equality holds. The altitude from \( A \) is the line through \( A \) which is perpendicular to \( BC \). The foot of this altitude is the point \( D \) where it meets \( BC \). The other altitudes are similarly defined.
British Mathematical Olympiad
Round 2 : Thursday, 26 January 2012

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other timezones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 27 January.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (29 March – 2 April 2012). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training. Those selected will be expected to participate in correspondence work and to attend further training. The UK Team of six for this summer’s IMO (to be held in Mar del Plata, Argentina, 4–16 July) will then be chosen.

Do not turn over until told to do so.

---

1. The diagonals $AC$ and $BD$ of a cyclic quadrilateral meet at $E$. The midpoints of the sides $AB$, $BC$, $CD$ and $DA$ are $P, Q, R$ and $S$ respectively. Prove that the circles $EPS$ and $EQR$ have the same radius.

2. A function $f$ is defined on the positive integers by $f(1) = 1$ and, for $n > 1$,
   
   $$f(n) = f\left(\left\lfloor \frac{2n-1}{3} \right\rfloor\right) + f\left(\left\lfloor \frac{2n}{3} \right\rfloor\right)$$

   where $\lfloor x \rfloor$ denotes the greatest integer less than or equal to $x$. Is it true that $f(n) - f(n-1) \leq n$ for all $n > 1$?

   [Here are some examples of the use of $\lfloor x \rfloor$: $\lfloor \pi \rfloor = 3$, $\lfloor 1729 \rfloor = 1729$ and $\lfloor \frac{2012}{1998} \rfloor = 2$.]

3. The set of real numbers is split into two subsets which do not intersect. Prove that for each pair $(m, n)$ of positive integers, there are real numbers $x < y < z$ all in the same subset such that $m(z-y) = n(y-x)$.

4. Show that there is a positive integer $k$ with the following property: if $a, b, c, d, e$ and $f$ are integers and $m$ is a divisor of

   $$a^n + b^n + c^n - d^n - e^n - f^n$$

   for all integers $n$ in the range $1 \leq n \leq k$, then $m$ is a divisor of $a^n + b^n + c^n - d^n - e^n - f^n$ for all positive integers $n$. 

United Kingdom Mathematics Trust

British Mathematical Olympiad
Round 1 : Friday, 30 November 2012

Time allowed 3\frac{1}{2} hours.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.
• To accommodate candidates sitting in other time-zones, please do not discuss the paper on the internet until 8am GMT on Saturday 1 December. Do not turn over until told to do so.

1. Isaac places some counters onto the squares of an 8 by 8 chessboard so that there is at most one counter in each of the 64 squares. Determine, with justification, the maximum number that he can place without having five or more counters in the same row, or in the same column, or on either of the two long diagonals.

2. Two circles $S$ and $T$ touch at $X$. They have a common tangent which meets $S$ at $A$ and $T$ at $B$. The points $A$ and $B$ are different. Let $AP$ be a diameter of $S$. Prove that $B$, $X$ and $P$ lie on a straight line.

3. Find all real numbers $x, y$ and $z$ which satisfy the simultaneous equations $x^2 - 4y + 7 = 0$, $y^2 - 6z + 14 = 0$ and $z^2 - 2x - 7 = 0$.

4. Find all positive integers $n$ such that $12n^2 - 119$ and $75n^2 - 539$ are both perfect squares.

5. A triangle has sides of length at most 2, 3 and 4 respectively. Determine, with proof, the maximum possible area of the triangle.

6. Let $ABC$ be a triangle. Let $S$ be the circle through $B$ tangent to $CA$ at $A$ and let $T$ be the circle through $C$ tangent to $AB$ at $A$. The circles $S$ and $T$ intersect at $A$ and $D$. Let $E$ be the point where the line $AD$ meets the circle $ABC$. Prove that $D$ is the midpoint of $AE$. 

2012/13 British Mathematical Olympiad
Round 1: Friday, 30 November 2012

1. Isaac places some counters onto the squares of an 8 by 8 chessboard so that there is at most one counter in each of the 64 squares. Determine, with justification, the maximum number that he can place without having five or more counters in the same row, or in the same column, or on either of the two long diagonals.

British Mathematical Olympiad
Round 1: Friday, 29 November 2013

Time allowed
3\frac{1}{2} hours.

Instructions
• Full written solutions - not just answers - are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.

• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.

• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.

• The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden.

• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.

• Staple all the pages neatly together in the top left hand corner.

• To accommodate candidates sitting in other time zones, please do not discuss the paper on the internet until 8am GMT on Saturday 30 November.

Do not turn over until told to do so.

1. Calculate the value of
\[
\frac{2014^4 + 4 \times 2013^4}{2013^2 + 4027^2} - \frac{2012^4 + 4 \times 2013^4}{2013^2 + 4025^2}.
\]

2. In the acute-angled triangle $ABC$, the foot of the perpendicular from $B$ to $CA$ is $E$. Let $l$ be the tangent to the circle $ABC$ at $B$. The foot of the perpendicular from $C$ to $l$ is $F$. Prove that $EF$ is parallel to $AB$.

3. A number written in base 10 is a string of 3\textsuperscript{2013} digit 3s. No other digit appears. Find the highest power of 3 which divides this number.

4. Isaac is planning a nine-day holiday. Every day he will go surfing, or water skiing, or he will rest. On any given day he does just one of these three things. He never does different water-sports on consecutive days. How many schedules are possible for the holiday?

5. Let $ABC$ be an equilateral triangle, and $P$ be a point inside this triangle. Let $D, E$ and $F$ be the feet of the perpendiculars from $P$ to the sides $BC, CA$ and $AB$ respectively. Prove that
a) $AF + BD + CE = AE + BF + CD$ and
b) $[APF] + [BPD] + [CPE] = [APE] + [BPF] + [CPD].$

The area of triangle $XYZ$ is denoted $[XYZ]$.

6. The angles $A, B$ and $C$ of a triangle are measured in degrees, and the lengths of the opposite sides are $a, b$ and $c$ respectively. Prove that
\[
60 \leq \frac{aA + bB + cC}{a + b + c} < 90.
\]
British Mathematical Olympiad
Round 2 : Thursday, 30 January 2014

Time allowed
Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 31 January.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (3–7 April 2014). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training and selection examinations. The UK Team of six for this summer’s IMO (to be held in Cape Town, South Africa, 3–13 July 2014) will then be chosen.

Do not turn over until told to do so.

1. Every diagonal of a regular polygon with 2014 sides is coloured in one of n colours. Whenever two diagonals cross in the interior, they are of different colours. What is the minimum value of n for which this is possible?

2. Prove that it is impossible to have a cuboid for which the volume, the surface area and the perimeter are numerically equal. The perimeter of a cuboid is the sum of the lengths of all its twelve edges.

3. Let \(a_0 = 4\) and define a sequence of terms using the formula \(a_n = a_{n-1}^2 - a_{n-1}\) for each positive integer \(n\).
   a) Prove that there are infinitely many prime numbers which are factors of at least one term in the sequence;
   b) Are there infinitely many prime numbers which are factors of no term in the sequence?

4. Let \(ABC\) be a triangle and \(P\) be a point in its interior. Let \(AP\) meet the circumcircle of \(ABC\) again at \(A'\). The points \(B'\) and \(C'\) are similarly defined. Let \(O_A\) be the circumcentre of \(BCP\). The circumcentres \(O_B\) and \(O_C\) are similarly defined. Let \(O_{A'}\) be the circumcentre of \(B'CP\). The circumcentres \(O_{B'}\) and \(O_{C'}\) are similarly defined. Prove that the lines \(O_AO_{A'}, O_BO_{B'}\) and \(O_CO_{C'}\) are concurrent.
1. Place the following numbers in increasing order of size, and justify your reasoning: 
   \(3^3, 3^4, 3^4, 4^3, 4^3\). 
   
   Note that \(a^b^c\) means \(a^{(b^c)}\).

2. Positive integers \(p, a\) and \(b\) satisfy the equation \(p^2 + a^2 = b^2\). Prove that if \(p\) is a prime greater than 3, then \(a\) is a multiple of 12 and \(2(p + a + 1)\) is a perfect square.

3. A hotel has ten rooms along each side of a corridor. An olympiad team leader wishes to book seven rooms on the corridor so that no two reserved rooms on the same side of the corridor are adjacent. In how many ways can this be done?

4. Let \(x\) be a real number such that \(t = x + x^{-1}\) is an integer greater than 2. Prove that \(t_n = x^n + x^{-n}\) is an integer for all positive integers \(n\). Determine the values of \(n\) for which \(t\) divides \(t_n\).

5. Let \(ABCD\) be a cyclic quadrilateral. Let \(F\) be the midpoint of the arc \(AB\) of its circumcircle which does not contain \(C\) or \(D\). Let the lines \(DF\) and \(AC\) meet at \(P\) and the lines \(CF\) and \(BD\) meet at \(Q\). Prove that the lines \(PQ\) and \(AB\) are parallel.

6. Determine all functions \(f(n)\) from the positive integers to the positive integers which satisfy the following condition: whenever \(a, b\) and \(c\) are positive integers such that \(1/a + 1/b = 1/c\), then
   \[
   1/f(a) + 1/f(b) = 1/f(c).
   \]
British Mathematical Olympiad
Round 2 : Thursday, 29 January 2015

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
  Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 30 January.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (26-30 March 2015). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training and selection examinations. The UK Team of six for this summer’s IMO (to be held in Chiang Mai, Thailand, 8–16 July 2015) will then be chosen.

Do not turn over until told to do so.

1. The first term $x_1$ of a sequence is 2014. Each subsequent term of the sequence is defined in terms of the previous term. The iterative formula is

$$x_{n+1} = \frac{(\sqrt{2} + 1)x_n - 1}{(\sqrt{2} + 1) + x_n}.$$ 

Find the 2015th term $x_{2015}$.

2. In Oddesdon Primary School there are an odd number of classes. Each class contains an odd number of pupils. One pupil from each class will be chosen to form the school council. Prove that the following two statements are logically equivalent.
   a) There are more ways to form a school council which includes an odd number of boys than ways to form a school council which includes an odd number of girls.
   b) There are an odd number of classes which contain more boys than girls.

3. Two circles touch one another internally at $A$. A variable chord $PQ$ of the outer circle touches the inner circle. Prove that the locus of the incentre of triangle $AQP$ is another circle touching the given circles at $A$. The incentre of a triangle is the centre of the unique circle which is inside the triangle and touches all three sides. A locus is the collection of all points which satisfy a given condition.

4. Given two points $P$ and $Q$ with integer coordinates, we say that $P$ sees $Q$ if the line segment $PQ$ contains no other points with integer coordinates. An $n$-loop is a sequence of $n$ points $P_1, P_2, \ldots, P_n$, each with integer coordinates, such that the following conditions hold:
   a) $P_i$ sees $P_{i+1}$ for $1 \leq i \leq n - 1$, and $P_n$ sees $P_1$;
   b) No $P_i$ sees any $P_j$ apart from those mentioned in (a);
   c) No three of the points lie on the same straight line.

Does there exist a 100-loop?
2015/16 British Mathematical Olympiad
Round 1: Friday, 27 November 2015

1. On Thursday 1st January 2015, Anna buys one book and one shelf. For the next two years, she buys one book every day and one shelf on alternate Thursdays, so she next buys a shelf on 15th January 2015. On how many days in the period Thursday 1st January 2015 until (and including) Saturday 31st December 2016 is it possible for Anna to put all her books on all her shelves, so that there is an equal number of books on each shelf?

2. Let $ABCD$ be a cyclic quadrilateral and let the lines $CD$ and $BA$ meet at $E$. The line through $D$ which is tangent to the circle $ADE$ meets the line $CB$ at $F$. Prove that the triangle $CDF$ is isosceles.

3. Suppose that a sequence $t_0, t_1, t_2, \ldots$ is defined by a formula $t_n = An^2 + Bn + C$ for all integers $n \geq 0$. Here $A$, $B$ and $C$ are real constants with $A \neq 0$. Determine values of $A$, $B$ and $C$ which give the greatest possible number of successive terms of the sequence which are also successive terms of the Fibonacci sequence. The Fibonacci sequence is defined by $F_0 = 0$, $F_1 = 1$ and $F_m = F_{m-1} + F_{m-2}$ for $m \geq 2$.

4. James has a red jar, a blue jar and a pile of 100 pebbles. Initially both jars are empty. A move consists of moving a pebble from the pile into one of the jars or returning a pebble from one of the jars to the pile. The numbers of pebbles in the red and blue jars determine the state of the game. The following conditions must be satisfied:
   a) The red jar may never contain fewer pebbles than the blue jar;
   b) The game may never be returned to a previous state.
What is the maximum number of moves that James can make?

5. Let $ABC$ be a triangle, and let $D$, $E$ and $F$ be the feet of the perpendiculars from $A$, $B$ and $C$ to $BC$, $CA$ and $AB$ respectively. Let $P$, $Q$, $R$ and $S$ be the feet of the perpendiculars from $D$ to $BA$, $BE$, $CF$ and $CA$ respectively. Prove that $P$, $Q$, $R$ and $S$ are collinear.

6. A positive integer is called charming if it is equal to 2 or is of the form $3^i5^j$ where $i$ and $j$ are non-negative integers. Prove that every positive integer can be written as a sum of different charming integers.
Time allowed  Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 29 January.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (31 March–4 April 2016). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training and selection examinations. The UK Team of six for this summer’s IMO (to be held in Hong Kong, China 6–16 July 2016) will then be chosen.

Do not turn over until told to do so.
British Mathematical Olympiad
Round 1: Friday, 2 December 2016

Time allowed
3$\frac{1}{2}$ hours.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.
• To accommodate candidates sitting in other time zones, please do not discuss the paper on the internet until 8am GMT on Saturday 3 December when the solutions video will be released at https://bmos.ukmt.org.uk.

Do not turn over until told to do so.
British Mathematical Olympiad
Round 2 : Thursday, 26 January 2017

Time allowed Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 27 January.

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (30 March-3 April 2017). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training and selection examinations. The UK Team of six for this year’s IMO (to be held in Rio de Janeiro, Brazil 12-23 July 2017) will then be chosen.

Do not turn over until told to do so.

1. This problem concerns triangles which have vertices with integer coordinates in the usual $x,y$-coordinate plane. For how many positive integers $n < 2017$ is it possible to draw a right-angled isosceles triangle such that exactly $n$ points on its perimeter, including all three of its vertices, have integer coordinates?

2. Let $\lfloor x \rfloor$ denote the greatest integer less than or equal to the real number $x$. Consider the sequence $a_1, a_2, \ldots$ defined by
   \[ a_n = \frac{1}{n} \left( \left\lfloor \frac{n}{1} \right\rfloor + \left\lfloor \frac{n}{2} \right\rfloor + \cdots + \left\lfloor \frac{n}{n} \right\rfloor \right) \]
   for integers $n \geq 1$. Prove that $a_{n+1} > a_n$ for infinitely many $n$, and determine whether $a_{n+1} < a_n$ for infinitely many $n$.

   [Here are some examples of the use of $\lfloor x \rfloor$: $\lfloor \pi \rfloor = 3$, $\lfloor 1729 \rfloor = 1729$ and $\lfloor 2017/1000 \rfloor = 2$.]

3. Consider a cyclic quadrilateral $ABCD$. The diagonals $AC$ and $BD$ meet at $P$, and the rays $AD$ and $BC$ meet at $Q$. The internal angle bisector of angle $\angle BQA$ meets $AC$ at $R$ and the internal angle bisector of angle $\angle APD$ meets $AD$ at $S$. Prove that $RS$ is parallel to $CD$.

4. Bobby’s booby-trapped safe requires a 3-digit code to unlock it. Alex has a probe which can test combinations without typing them on the safe. The probe responds Fail if no individual digit is correct. Otherwise it responds Close, including when all digits are correct. For example, if the correct code is 014, then the responses to 099 and 014 are both Close, but the response to 140 is Fail. If Alex is following an optimal strategy, what is the smallest number of attempts needed to guarantee that he knows the correct code, whatever it is?
British Mathematical Olympiad
Round 1 : Friday, 1 December 2017

Time allowed 3 1/4 hours.

Instructions • Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
• One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
• Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.
• The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden.
• Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.
• Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.
• Staple all the pages neatly together in the top left hand corner.
• To accommodate candidates sitting in other time zones, please do not discuss the paper on the internet until 8am GMT on Saturday 2 December when the solutions video will be released at https://bmos.ukmt.org.uk

Do not turn over until told to do so.

2017/18 British Mathematical Olympiad
Round 1: Friday, 1 December 2017

1. Helen divides 365 by each of 1, 2, 3, . . . , 365 in turn, writing down a list of the 365 remainders. Then Phil divides 366 by each of 1, 2, 3, . . . , 366 in turn, writing down a list of the 366 remainders. Whose list of remainders has the greater sum and by how much?

2. In a 100-day period, each of six friends goes swimming on exactly 75 days. There are n days on which at least five of the friends swim. What are the largest and smallest possible values of n?

3. The triangle ABC has AB = CA and BC is its longest side. The point N is on the side BC and BN = AB. The line perpendicular to AB which passes through N meets AB at M. Prove that the line MN divides both the area and the perimeter of triangle ABC into equal parts.

4. Consider sequences a1, a2, a3, . . . of positive real numbers with a1 = 1 and such that

\[ a_{n+1} + a_n = (a_{n+1} - a_n)^2 \]

for each positive integer n. How many possible values can \( a_{2017} \) take?

5. If we take a 2 × 100 (or 100 × 2) grid of unit squares, and remove alternate squares from a long side, the remaining 150 squares form a 100-comb. Henry takes a 200 × 200 grid of unit squares, and chooses k of these squares and colours them so that James is unable to choose 150 uncoloured squares which form a 100-comb. What is the smallest possible value of k?

6. Matthew has a deck of 300 cards numbered 1 to 300. He takes cards out of the deck one at a time, and places the selected cards in a row, with each new card added at the right end of the row. Matthew must arrange that, at all times, the mean of the numbers on the cards in the row is an integer. If, at some point, there is no card remaining in the deck which allows Matthew to continue, then he stops. When Matthew has stopped, what is the smallest possible number of cards that he could have placed in the row? Give an example of such a row.
British Mathematical Olympiad
Round 2 : Thursday 25 January 2018

Time allowed
Three and a half hours.
Each question is worth 10 marks.

Instructions
• Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt. Rough work should be handed in, but should be clearly marked.
• One or two complete solutions will gain far more credit than partial attempts at all four problems.
• The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
• Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
• To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 26 January. Candidates sitting the paper in time zones more than 3 hours ahead of GMT must sit the paper on Friday 26 January (as defined locally).

In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (4–9 April 2018). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training and selection examinations. The UK Team of six for this year’s IMO (to be held in Cluj–Napoca, Romania 3–14 July 2018) will then be chosen.

Do not turn over until told to do so.

2017/18 British Mathematical Olympiad
Round 2

1. Consider triangle $ABC$. The midpoint of $AC$ is $M$. The circle tangent to $BC$ at $B$ and passing through $M$ meets the line $AB$ again at $P$. Prove that $AB \times BP = 2BM^2$.

2. There are $n$ places set for tea around a circular table, and every place has a small cake on a plate. Alice arrives first, sits at the table, and eats her cake (but it isn’t very nice). Next the Mad Hatter arrives, and tells Alice that she will have a lonely tea party, and that she must keep on changing her seat, and each time she must eat the cake in front of her (if it has not yet been eaten). In fact the Mad Hatter is very bossy, and tells Alice that, for $i = 1, 2, \ldots, n-1$, when she moves for the $i$-th time, she must move $a_i$ places and he hands Alice the list of instructions $a_1, a_2, \ldots, a_{n-1}$. Alice does not like the cakes, and she is free to choose, at every stage, whether to move clockwise or anticlockwise. For which values of $n$ can the Mad Hatter force Alice to eat all the cakes?

3. It is well known that, for each positive integer $n$,

$$1^3 + 2^3 + \cdots + n^3 = \frac{n^2(n+1)^2}{4}$$

and so is a square. Determine whether or not there is a positive integer $m$ such that

$$(m+1)^3 + (m+2)^3 + \cdots + (2m)^3$$

is a square.

4. Let $f$ be a function defined on the real numbers and taking real values. We say that $f$ is absorbing if $f(x) \leq f(y)$ whenever $x \leq y$ and $f^{2018}(z)$ is an integer for all real numbers $z$.

a) Does there exist an absorbing function $f$ such that $f(x)$ is an integer for only finitely many values of $x$?

b) Does there exist an absorbing function $f$ and an increasing sequence of real numbers $a_1 < a_2 < a_3 < \ldots$ such that $f(x)$ is an integer only if $x = a_t$ for some $t$?

Note that if $k$ is a positive integer and $f$ is a function, then $f^k$ denotes the composition of $k$ copies of $f$. For example $f^3(t) = f(f(f(t)))$ for all real numbers $t$. 

INSTRUCTIONS

1. Time allowed: 3\frac{1}{2} hours.

2. Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.

3. One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.

4. Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.

5. The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden.

6. Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your name, initials and school in the top right hand corner.

7. Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.

8. Staple all the pages neatly together in the top left hand corner.

9. To accommodate candidates sitting in other time zones, please do not discuss the paper on the internet until 8am GMT on Saturday 1 December when the solutions video will be released at [https://bmos.ukmt.org.uk](https://bmos.ukmt.org.uk)

10. **Do not turn over until told to do so.**

Enquiries about the British Mathematical Olympiad should be sent to:

*UK Mathematics Trust, School of Mathematics, University of Leeds, Leeds LS2 9JT*

☎ 0113 343 2339  enquiry@ukmt.org.uk  www.ukmt.org.uk
1. A list of five two-digit positive integers is written in increasing order on a blackboard. Each of the five integers is a multiple of 3, and each digit 0,1,2,3,4,5,6,7,8,9 appears exactly once on the blackboard. In how many ways can this be done? Note that a two-digit number cannot begin with the digit 0.

2. For each positive integer \( n \geq 3 \), we define an \( n \)-ring to be a circular arrangement of \( n \) (not necessarily different) positive integers such that the product of every three neighbouring integers is \( n \). Determine the number of integers \( n \) in the range \( 3 \leq n \leq 2018 \) for which it is possible to form an \( n \)-ring.

3. Ares multiplies two integers which differ by 9. Grace multiplies two integers which differ by 6. They obtain the same product \( T \). Determine all possible values of \( T \).

4. Let \( \Gamma \) be a semicircle with diameter \( AB \). The point \( C \) lies on the diameter \( AB \) and points \( E \) and \( D \) lie on the arc \( BA \), with \( E \) between \( B \) and \( D \). Let the tangents to \( \Gamma \) at \( D \) and \( E \) meet at \( F \). Suppose that \( \angle ACD = \angle ECB \).

Prove that \( \angle EFD = \angle ACD + \angle ECB \).

5. Two solid cylinders are mathematically similar. The sum of their heights is 1. The sum of their surface areas is \( 8\pi \). The sum of their volumes is \( 2\pi \). Find all possibilities for the dimensions of each cylinder.

6. Ada the ant starts at a point \( O \) on a plane. At the start of each minute she chooses North, South, East or West, and marches 1 metre in that direction. At the end of 2018 minutes she finds herself back at \( O \). Let \( n \) be the number of possible journeys which she could have made. What is the highest power of 10 which divides \( n \)?
BRITISH MATHEMATICAL OLYMPIAD
ROUND 2
Thursday 24 January 2019

INSTRUCTIONS
1. Time allowed: $3\frac{1}{2}$ hours. Each question is worth 10 marks.
2. Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
3. Rough work should be handed in, but should be clearly marked.
4. One or two complete solutions will gain far more credit than partial attempts at all four problems.
5. The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
6. Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
7. To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 25 January. Candidates sitting the paper in time zones more than 3 hours ahead of GMT must sit the paper on Friday 25 January (as defined locally).
8. In early March, twenty students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (2–7 April 2019). At the training session, students sit a pair of IMO-style papers and eight students will be selected for further training and selection examinations. The UK Team of six for this year’s IMO (to be held in Bath, United Kingdom 11–22 July 2019) will then be chosen.
9. Do not turn over until told to do so.

Enquiries about the British Mathematical Olympiad should be sent to:
UK Mathematics Trust, School of Mathematics, University of Leeds,
Leeds LS2 9JT
0113 343 2339 enquiry@ukmt.org.uk www.ukmt.org.uk
1. Let $ABC$ be a triangle. Let $L$ be the line through $B$ perpendicular to $AB$. The perpendicular from $A$ to $BC$ meets $L$ at the point $D$. The perpendicular bisector of $BC$ meets $L$ at the point $P$. Let $E$ be the foot of the perpendicular from $D$ to $AC$.

Prove that triangle $BPE$ is isosceles.

2. For some integer $n$, a set of $n^2$ magical chess pieces arrange themselves on a square $n^2 \times n^2$ chessboard composed of $n^4$ unit squares. At a signal, the chess pieces all teleport to another square of the chessboard such that the distance between the centres of their old and new squares is $n$. The chess pieces win if, both before and after the signal, there are no two chess pieces in the same row or column. For which values of $n$ can the chess pieces win?

3. Let $p$ be an odd prime. How many non-empty subsets of

$$\{1, 2, 3, \ldots, p - 2, p - 1\}$$

have a sum which is divisible by $p$?

4. Find all functions $f$ from the positive real numbers to the positive real numbers for which $f(x) \leq f(y)$ whenever $x \leq y$ and

$$f(x^4) + f(x^2) + f(x) + f(1) = x^4 + x^2 + x + 1$$

for all $x > 0$. 
Instructions

1. Time allowed: 3½ hours.

2. Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.

3. One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.

4. Each question carries 10 marks. However, earlier questions tend to be easier. In general you are advised to concentrate on these problems first.

5. The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden.

6. Start each question on a fresh sheet of paper. Write on one side of the paper only. On each sheet of working write the number of the question in the top left hand corner and your Participant ID, and UKMT Centre Number in the top right hand corner.

7. Complete the cover sheet provided and attach it to the front of your script, followed by your solutions in question number order.

8. Staple all the pages neatly together in the top left hand corner.

9. To accommodate candidates sitting in other time zones, please do not discuss the paper on the internet until 8am GMT on Saturday 30 November when the solutions video will be released at [https://bmos.ukmt.org.uk](https://bmos.ukmt.org.uk)

10. Do not turn over until told to do so.

Enquiries about the British Mathematical Olympiad should be sent to:

[UK Mathematics Trust, School of Mathematics, University of Leeds, Leeds LS2 9JT](mailto:enquiry@ukmt.org.uk)

[0113 343 2339](tel:01133432339)  [enquiry@ukmt.org.uk](mailto:enquiry@ukmt.org.uk)  [www.ukmt.org.uk](http://www.ukmt.org.uk)
1. Show that there are at least three prime numbers $p$ less than 200 for which $p + 2$, $p + 6$, $p + 8$ and $p + 12$ are all prime. Show also that there is only one prime number $q$ for which $q + 2$, $q + 6$, $q + 8$, $q + 12$ and $q + 14$ are all prime.

2. A sequence of integers $a_1, a_2, a_3, \ldots$ satisfies the relation:

$$4a_{n+1}^2 - 4a_na_{n+1} + a_n^2 - 1 = 0$$

for all positive integers $n$. What are the possible values of $a_1$?

3. Two circles $S_1$ and $S_2$ are tangent at $P$. A common tangent, not through $P$, touches $S_1$ at $A$ and $S_2$ at $B$. Points $C$ and $D$, on $S_1$ and $S_2$ respectively, are outside the triangle $APB$ and are such that $P$ is on the line $CD$.

Prove that $AC$ is perpendicular to $BD$.

4. There are 2019 penguins waddling towards their favourite restaurant. As the penguins arrive, they are handed tickets numbered in ascending order from 1 to 2019, and told to join the queue. The first penguin starts the queue. For each $n > 1$ the penguin holding ticket number $n$ finds the greatest $m < n$ which divides $n$ and enters the queue directly behind the penguin holding ticket number $m$. This continues until all 2019 penguins are in the queue.

(a) How many penguins are in front of the penguin with ticket number 2?

(b) What numbers are on the tickets held by the penguins just in front of and just behind the penguin holding ticket 33?

5. Six children are evenly spaced around a circular table. Initially, one has a pile of $n > 0$ sweets in front of them, and the others have nothing. If a child has at least four sweets in front of them, they may perform the following move: eat one sweet and give one sweet to each of their immediate neighbours and to the child directly opposite them. An arrangement is called perfect if there is a sequence of moves which results in each child having the same number of sweets in front of them. For which values of $n$ is the initial arrangement perfect?

6. A function $f$ is called good if it assigns an integer value $f(m,n)$ to every ordered pair of integers $(m,n)$ in such a way that for every pair of integers $(m,n)$ we have:

$$2f(m,n) = f(m-n, n-m) + m + n = f(m+1,n) + f(m,n+1) - 1.$$ 

Find all good functions.
British Mathematical Olympiad
Round 2
Thursday 30 January 2020
© 2020 UK Mathematics Trust

Instructions
1. Time allowed: $3\frac{1}{2}$ hours. Each question is worth 10 marks.
2. Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
3. Write on one side of the paper only and start each question on a fresh sheet.
4. Rough work should be handed in, but should be clearly marked.
5. One or two complete solutions will gain far more credit than partial attempts at all four problems.
6. The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
7. Staple all the pages neatly together in the top left hand corner, with questions 1, 2, 3, 4 in order, and the cover sheet at the front.
8. To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 8am GMT on Friday 31 January. Candidates sitting the paper in time zones more than 3 hours ahead of GMT must sit the paper on Friday 31 January (as defined locally).
9. In early March, twenty-four students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend the training session to be held at Trinity College, Cambridge (31 March–5 April 2020). At the training session, students sit a pair of IMO-style papers and some students will be selected for further training and selection examinations. The UK Team of six for this year’s IMO (to be held in St Petersburg, Russia 8–18 July 2020) will then be chosen.
10. Do not turn over until told to do so.

Enquiries about the British Mathematical Olympiad should be sent to:
UK Mathematics Trust, School of Mathematics, University of Leeds, Leeds LS2 9JT

0113 343 2339  enquiry@ukmt.org.uk  www.ukmt.org.uk
1. A sequence $a_1, a_2, a_3, \ldots$ has $a_1 > 2$ and satisfies:

$$a_{n+1} = \frac{a_n(a_n - 1)}{2}$$

for all positive integers $n$. For which values of $a_1$ are all the terms of the sequence odd integers?

2. Describe all collections $S$ of at least four points in the plane such that no three points are collinear and such that every triangle formed by three points in $S$ has the same circumradius.

(The circumradius of a triangle is the radius of the circle passing through all three of its vertices.)

3. A $2019 \times 2019$ square grid is made up of $2019^2$ unit cells. Each cell is coloured either black or white. A colouring is called balanced if, within every square subgrid made up of $k^2$ cells for $1 \leq k \leq 2019$, the number of black cells differs from the number of white cells by at most one. How many different balanced colourings are there?

(Two colourings are different if there is at least one cell which is black in exactly one of them.)

4. A sequence $b_1, b_2, b_3, \ldots$ of nonzero real numbers has the property that

$$b_{n+2} = \frac{b_{n+1}^2 - 1}{b_n}$$

for all positive integers $n$.

Suppose that $b_1 = 1$ and $b_2 = k$ where $1 < k < 2$. Show that there is some constant $B$, depending on $k$, such that $-B \leq b_n \leq B$ for all $n$. Also show that, for some $1 < k < 2$, there is a value of $n$ such that $b_n > 2020$.

INSTRUCTIONS

1. Time allowed: 2 hours.
2. Each question in Section A carries 5 marks. Each question in Section B carries 10 marks. Earlier questions tend to be easier; you are advised to concentrate on these problems first.
3. In Section A only answers are required.
4. Use the answer sheet provided for Section A.
5. In Section B full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then write up your best attempt. Do not hand in rough work.
6. One complete solution will gain more credit than several unfinished attempts. It is more important to complete a small number of questions than to try all the problems.
7. Write on one side of the paper only. Start each question in Section B on a fresh sheet of paper: scans of your work will need to be uploaded question by question for marking.
8. On each sheet of working for Section B, write the number of the question in the top left hand corner and your Participant ID and UKMT centre number. Do not write your name.
9. The use of rulers, set squares and compasses is allowed, but calculators and protractors are forbidden. You are strongly encouraged to use geometrical instruments to construct large, accurate diagrams for Section B geometry problems.
10. At the end of the paper, return to your Section A answer sheet and indicate which Section B questions you have attempted.
11. Please do not discuss the paper on the internet until 5pm GMT on Wednesday 2 December when the solutions video will be released at bmos.ukmt.org.uk
12. Do not turn over until told to do so.

Enquiries about the British Mathematical Olympiad should be sent to:
UK Mathematics Trust, School of Mathematics, University of Leeds, Leeds LS2 9JT
☎️ 0113 343 2339  enquiry@ukmt.org.uk  www.ukmt.org.uk
Section A

The questions in Section A are worth a maximum of five points each. Only answers are required. Please use the answer sheet provided.

1. Alice and Bob take it in turns to write numbers on a blackboard. Alice starts by writing an integer $a$ between $-100$ and $100$ inclusive on the board. On each of Bob’s turns he writes twice the number Alice wrote last. On each of Alice’s subsequent turns she writes the number $45$ less than the number Bob wrote last. At some point, the number $a$ is written on the board for a second time. Find the possible values of $a$.

2. A triangle has side lengths $a$, $a$ and $b$. It has perimeter $P$ and area $A$. Given that $b$ and $P$ are integers, and that $P$ is numerically equal to $A^2$, find all possible pairs $(a, b)$.

3. A square piece of paper is folded in half along a line of symmetry. The resulting shape is then folded in half along a line of symmetry of the new shape. This process is repeated until $n$ folds have been made, giving a sequence of $n + 1$ shapes. If we do not distinguish between congruent shapes, find the number of possible sequences when:

(a) $n = 3$;
(b) $n = 6$;
(c) $n = 9$.

(When $n = 1$ there are two possible sequences.)

4. In the equation

$$A^{AA} + AA = B,B,C,D,E,B,B,B,E$$

the letters $A$, $B$, $C$, $D$ and $E$ represent different base 10 digits (so the right hand side is a sixteen digit number and $AA$ is a two digit number). Given that $C = 9$, find $A$, $B$, $D$ and $E$. 
Section B

The questions in Section B are worth a maximum of ten points each. Full written solutions are required. Please begin each question on a new sheet of paper.

5. Let points $A, B$ and $C$ lie on a circle $\Gamma$. Circle $\Delta$ is tangent to $AC$ at $A$. It meets $\Gamma$ again at $D$ and the line $AB$ again at $P$. The point $A$ lies between points $B$ and $P$. Prove that if $AD = DP$, then $BP = AC$.

6. Given that an integer $n$ is the sum of two different powers of 2 and also the sum of two different Mersenne primes, prove that $n$ is the sum of two different square numbers.

(A Mersenne prime is a prime number which is one less than a power of two.)

7. Evie and Odette are playing a game. Three pebbles are placed on the number line; one at $-2020$, one at $2020$, and one at $n$, where $n$ is an integer between $-2020$ and $2020$. They take it in turns moving either the leftmost or the rightmost pebble to an integer between the other two pebbles. The game ends when the pebbles occupy three consecutive integers.

Odette wins if their sum is odd; Evie wins if their sum is even. For how many values of $n$ can Evie guarantee victory if:

(a) Odette goes first;
(b) Evie goes first?
INSTRUCTIONS
1. Time allowed: 3½ hours. Each question is worth 10 marks.
2. Full written solutions – not just answers – are required, with complete proofs of any assertions you may make. Marks awarded will depend on the clarity of your mathematical presentation. Work in rough first, and then draft your final version carefully before writing up your best attempt.
3. One or two complete solutions will gain far more credit than partial attempts at all four problems.
4. Write on one side of the paper only and start each question on a fresh sheet.
5. You should write in blue or black ink, but may use pencil and other colours for diagrams.
6. You may hand in rough work for each question where it contains calculations, examples or ideas not present in your final attempt; write ‘ROUGH’ at the top of each page of rough work.
7. The use of rulers and compasses is allowed, but calculators and protractors are forbidden.
8. Write your candidate number and UKMT centre number neatly in the top left corner of each page and arrange them so that your teacher can easily upload them to the marking platform.
9. To accommodate candidates sitting in other time zones, please do not discuss any aspect of the paper on the internet until 9am GMT on Friday 29 January. Candidates sitting the paper in time zones more than 3 hours ahead of GMT must sit the paper on the morning of Friday 29 January (as defined locally).
10. In early March, top-scoring students eligible to represent the UK at the International Mathematical Olympiad will be invited to attend a week of sessions, which will be held in an online format during the Easter holidays, comprising training for olympiads and general mathematical interest. Tests to select the UK team of six for this year’s IMO (to be hosted by Russia, possibly in a virtual format, 14–24 July 2021) will take place after the training week.
11. Do not turn over until told to do so.

Enquiries about the British Mathematical Olympiad should be sent to:
UK Mathematics Trust, School of Mathematics, University of Leeds, Leeds LS2 9JT
☎ 0113 365 1121 enquiry@ukmt.org.uk www.ukmt.org.uk
1. A positive integer $n$ is called *good* if there is a set of divisors of $n$ whose members sum to $n$ and include 1. Prove that every positive integer has a multiple which is good.

2. Eliza has a large collection of $a \times a$ and $b \times b$ tiles where $a$ and $b$ are positive integers. She arranges some of these tiles, without overlaps, to form a square of side length $n$. Prove that she can cover another square of side length $n$ using only one of her two types of tile.

3. Let $ABC$ be a triangle with $AB > AC$. Its circumcircle is $\Gamma$ and its incentre is $I$. Let $D$ be the contact point of the incircle of $ABC$ with $BC$.

Let $K$ be the point on $\Gamma$ such that $\angle AKI$ is a right angle.

Prove that $AI$ and $KD$ meet on $\Gamma$.

4. Matthew writes down a sequence $a_1, a_2, a_3, \ldots$ of positive integers. Each $a_n$ is the smallest positive integer, different from all previous terms in the sequence, such that the mean of the terms $a_1, a_2, \ldots, a_n$ is an integer. Prove that the sequence defined by $a_i - i$ for $i = 1, 2, 3, \ldots$ contains every integer exactly once.
